

5G-VINNI

Webinar for ICT-19 proposers

Monday, 15 October 2018, 15:00-
17:00 CEST

Guidelines to Webinar

- All participants are muted
- You can formulate your questions in the chat window
- The questions will be handed over by the moderator to the presenter or the site facility operator
 - Please formulate your question as precise as possible

Agenda

- 5G-VINNI Overview by Pål Grønsund, Telenor
- On-boarding process for ICT-19 proposals and projects by Duncan Silvey, Nokia
- Questions and answers
- Conclusions

Key take-aways

- Support from 5G-VINNI for ICT-19 trials and experiments is planned & funded within the regular operations of 5G-VINNI until June 2021
 - Any support from July 2021 may be purchased directly from the 5G-VINNI facility site providers
 - The main facility providers guarantee availability for one year after 5G-VINNI project ends
- ICT-19 projects must include in their own budget provisions for any additional resources and equipment, beyond that provided by 5G-VINNI, needed for the integration and execution of their experiments/trials
- Where the individual experiments/trials require bespoke enhancements/customisations of the 5G-VINNI facility, beyond the existing facility sites or capabilities as provided by the 5G-VINNI project, a mechanism for the funding of such necessary enhancement/customisation work must be proposed
- Please be aware that the human resources in 5G-VINNI are not unlimited and must be balanced against all requests for integration and trials execution support
 - There will be a practical limit on the amount of additional bespoke work for trials/experiments that can be supported, based on their complexity, scale and integration requirements
- We strongly recommend that you discuss your requirements with us in advance to assess the level of assistance/support you will need and allow you to make provision for it in your proposal

Please contact 5G-VINNI for further information, discussion and interest
