

2nd 5GINFIRE Open Call

“Innovative experiments”

Call information:

Call identifier: **5ginfire-2** - 2nd 5GINFIRE Open Call “Innovative experiments”

Submission deadline: 18 December 2018 at 17:00 Brussels local time

Mandatory feasibility check deadline*: 5 December 2018 at 17:00 Brussels local time

*Please, read instruction for the feasibility check below.

Call objectives:

The main technical objective of 5GinFIRE is to build and operate an open and extensible 5G NFV-based reference (Open5G-NFV) ecosystem of experimental facilities that not only integrates existing FIRE facilities with new vertical-specific ones, but also lays down the foundations for instantiating fully softwarized architectures of vertical industries and experimenting with them. The initial instantiation of the Open5G-NFV ecosystem was targeted to the automotive vertical industry requirements, addressed across state-of-the-art 5G infrastructures. However, it is as generic as possible in order to host other verticals applications.

In alignment with the overall project objectives 5GINFIRE is organising a competitive open call targeting external organisations, including industry, SMEs, research institutions, and academia, interested in performing experiments on the top of the infrastructure provided by 5GinFIRE. This 5GinFIRE open call invites **experimenters** to use the 5GINFIRE experimental facilities, taking advantage of the provided testbed features such as SDN, NFV and VxFs to test vertical applications.

Available funding:

- Maximum of 75,000€ funding per accepted proposal
- Total of 450,000€ is available for this Open Call
- At least three experiments from SMEs will be accepted in this call (if ranked above threshold)

Further remarks:

- All proposers must contact the 5GINFIRE consortium and elaborate their intentions in order to verify the **feasibility** of the proposals to be implemented in the scope of the 5GINFIRE project and to receive a first feedback on in the proposal planned activities.
 - To perform the feasibility check, up to one page description of planned experiment has to be sent to contact@5GinFIRE.eu. In the e-mail subject line or first line of the be-mail text, the short name of the proposal and 5GINFIRE facilities planned to be used in the experiment have to be mentioned
 - Proposers that have participated in previous calls must inform of their intention to resubmit as well as whether and to what extend the new proposal has been improved/modified.
- Proposals will only be accepted from a single party eligible for participation in EC H2020-projects.
- Proposers' organizations can submit multiple proposals, but only one proposal per single organization might be selected for funding in this Open Call.
- The following organisations are not eligible to participate in the open call, and any proposal received by these organisations will not be admitted to the evaluation process:
 - Beneficiaries of 5GINFIRE
 - Third parties in 5GINFIRE receiving financial support for providing additional infrastructures (1st open call - phase I and phase II)
 - Third parties in 5GINFIRE receiving financial support for functionalities (1st open call - phase II, category 2-a)
 - Third parties in 5GINFIRE receiving financial support for experimentation (1st open call - phase II, category 1)
 - In doubt please contact the project via an email to contact@5ginfire.eu.
- The proposal has to be submitted in English language through the 5GINFIRE submission tool by using specific proposal template (mandatory). Access to the submission toll and proposal templates is available on the 5GINFIRE website (<https://5ginfire.eu/>).

Contact: contact@5GinFIRE.eu

The contact e-mail address is archived.

1 About 5GINFIRE

5G network infrastructures and embodied technologies are considered as a key asset of this emerging common environment and instrumental for the digitalization of the traditional industries, so-called vertical industry application sectors. Addressing these key questions, the main 5GINFIRE goal is to build and operate an open, and extensible 5G NFV-based reference (Open5G-NFV) ecosystem of experimental facilities that not only integrates existing FIRE facilities with new vertical-specific ones but also lays down the foundations for instantiating fully softwarised architectures of vertical industries and experimenting with them. The initial instantiation of the Open5G-NFV ecosystem will be driven by the automotive vertical deployed across state-of-the-art 5G infrastructures, however, it will also be as generic as possible in order to host other verticals.

In order to offer its testbeds to a wide community of experimenters, the 5GINFIRE project will organize at least two open calls for experiments to be implemented and executed on the top of the 5GINFIRE experimental infrastructure. Furthermore, the 5GINFIRE open calls will also seek for further relevant testbeds to be integrated within the 5GINFIRE experimental framework and offered to be used by the experimenters.

1.1 5GINFIRE objectives

The 5GINFIRE is, by design, a duality project that sets its overall technical objectives as a prerequisite for achieving a longer term strategic objective that aspires to resonate beyond its lifetime and act as valuable source of constant feedback. As such, it is indeed quite ambitious but at the same time pragmatic and feasible in identifying, building, and eventually specifying, a critical mass of technological components and optimal architecture designs.

5GINFIRE Reference Model Architecture

In order to guarantee architectural and technological convergence the proposed open, and extensible 5G NFV-based reference (Open5G-NFV) ecosystem of experimental facilities will be built in alignment with on-going standardization and open source activities, also targeted by other closely related programme activities such as FIWARE and 5G-PPP to name a few. Accordingly, the Open5G-NFV FIRE ecosystem may serve as the forerunner experimental playground wherein new components, architecture designs and APIs may be tried and proposed before they are ported to more industrially “mainstream” 5G networks that are expected to emerge in large scale.

Accordingly, the specific 5GINFIRE project objectives are defined as follows:

- Establish the first 5G NFV-enabled experimental testbed capable of instantiating and supporting vertical industries based on industry-leading and open source technologies
- Specify Implement and Operate Verticals drawn from the Automotive Industry on top of the Open5G-NFV common experimental facility.
- Provide a platform for innovation in Europe specifically suitable for SMEs
- Develop open source Management and Orchestration (MANO) functionality and toolsets for experimental architecture instantiation featuring automation of deployment process, orchestration and lifecycle management aiming at enabling truly Open Experimentation that fosters innovation.
- Enable in-testbed and extra-testbed demonstrations in an open reference platform
- Open software and APIs for rapid prototyping and inclusion of new building block functionalities with the necessary metadata definition
- Accelerate the formation of an open European-initiated, global-reach, long-term sustainable community and liaise with other relevant initiatives to further the goals of this project.

1.2 5GINFIRE experimental facilities

The 5GINFIRE experimental facilities - the available testbeds / infrastructures and experimenters tools - are described on the 5GINFIRE website (<https://5ginfire.eu/>).

2 Open Call definition

2.1 Technical scope of the Call

In this Open Call, the 5GINFIRE is looking for experiments to use the 5GINFIRE experimentation facilities, taking advantage of the provided testbed features such as SDN applications, VNFs and VxFs to test vertical applications. Priority will be given to experimenters that provide additional functionalities (VNFs, VxFs, ...) needed for the experimentation, which can remain in 5GINFIRE catalogue. For example, Core Network VNFs like open source PCRF (Policy and Charging Rules Function) or probes (potentially based on Wireshark but with dedicated plugins and the ability to be deployed through OSM) are expected but also VxFs which would be more at application level like a webRTC based video conferencing system or to support any further application in the automotive sector.

2.2 Available budget

Available funding for this Open Call will allow acceptance of at least six experiments (subject of evaluations)

- Maximum of 75,000€ funding per accepted proposal
- Total of 450,000€ is available for this Open Call
- At least three experiments from SMEs will be accepted in this call (if ranked above threshold)

The budget to be allocated to the successful proposals covers personnel and other costs related to the following activities:

- Getting familiar with 5GINFIRE testbeds and overall infrastructure
- Detailed definition, implementation, and execution of the experiment
- Reporting to the 5GINFIRE consortium and submission of deliverables
- Attending required project meetings/events (travel costs)
- Other costs related to implementation of experiments

As a 3rd party, the proposing party needs to include an overview of the estimated costs in its proposal at the time of submission. Costs consist of personnel costs, direct costs (such as travel, consumables, etc.) and indirect costs. The costs of a 3rd party have to comply with the rules and the principles mentioned in Section I, Article 6 (Eligible and ineligible costs) of the H2020 AGA — Annotated Model Grant Agreement (see http://ec.europa.eu/research/participants/data/ref/h2020/grants_manual/amga/h2020-amga_en.pdf), in the same way as the beneficiaries, and must be recorded in the accounts of the 3rd Party. In other words, the rules relating to eligibility of costs, identification of direct and indirect costs and upper funding limits apply as well as to those concerning controls and audits of Section I, Article 22 of the H2020 AGA.

2.3 Evaluations and ranking of the proposals

To perform evaluations of the received proposals for financing the third parties through the Open Call mechanism, the project will involve independent experts, which cannot be part of the consortium and cannot evaluate proposals where a conflict of interest can be identified. For each of the received proposals, at least two assigned experts will perform off-line reviews independently of each other. Afterwards, consensus meetings for all proposals among involved experts will be held either as face-to-face or audio/video meetings, where a common opinion and rating will be built up for all the proposals.

The independent experts will be advised to perform the proposal evaluations, including their rating and ranking, in accordance with requirements and objectives specified in the Open Calls, along at least the following three criteria:

- Impact (threshold = 3): societal and economic value of the targeted product/service
- Innovation and technology (threshold = 3): innovativeness and technological value of the proposal
- Implementation (threshold = 3): quality of methodology and of proposed participants

The last step in the evaluation process will be to create ranking among all received proposals, which will be done in cooperation with all independent experts involved in the evaluations. Integration of the proposals in the project plan will be done after final approval of the ranking by EC.

When scores are equal, any further prioritization will be based on other appropriate characteristics, which will be decided by the panel of evaluators, related to the contribution of the proposal to the project, in accordance with the **specific conditions of the Call**:

- At least three experiments from SMEs will be accepted in this call (if ranked above threshold)
- The priority of the call is to allow experimentation targeting different vertical sectors. Thus, among the best ranked proposals (if rated at the evaluation threshold as minimum), the experiment targeting various vertical sectors will be selected, starting from the best ranked proposal.
- Furthermore, at least one proposal (if rated at the evaluation threshold as minimum) related to security and robustness of solutions will be accepted.
- Priority will be also given to experimenter proposals providing additional functionalities (e.g. VNFs) which will remain in the public 5GINFIRE catalogue available to be used by other experimenters at least until end of the 5GINFIRE project.

Evaluation of the received proposals, ranking, and decision on proposals to be funded will be completed until mid of October 2018.

2.4 Eligibility for participation in the call and submission of proposals

- All proposers must contact the 5GINFIRE consortium and elaborate their intentions in order to verify the **feasibility** of the proposals to be implemented in the scope of the 5GINFIRE project and to receive a first feedback on in the proposal planned activities.
 - To perform the feasibility check, up to one page description of planned experiment has to be sent to contact@5GinFIRE.eu. In the e-mail subject line or first line of the be-mail text, the short name of the proposal and 5GINFIRE facilities planned to be used in the experiment have to be mentioned
 - Proposers that have participated in previous calls must inform of their intention to resubmit as well as whether and to what extend the new proposal has been improved/modified.
- Proposals will only be accepted from a single party eligible for participation in EC H2020-projects.
- Proposers' organizations can submit multiple proposals, but only one proposal per single organization might be selected for funding in this Open Call.
- The following organisations are not eligible to participate in the open call, and any proposal received by these organisations will not be admitted to the evaluation process:
 - Beneficiaries of 5GINFIRE
 - Third parties in 5GINFIRE receiving financial support for providing additional infrastructures (1st open call - phase I and phase II)
 - Third parties in 5GINFIRE receiving financial support for functionalities (1st open call - phase II, category 2-a)
 - Third parties in 5GINFIRE receiving financial support for experimentation (1st open call - phase II, category 1)
 - In doubt please contact the project via an email to contact@5ginfire.eu.
- The proposal has to be submitted in English language through the 5GINFIRE submission tool by using specific proposal template (mandatory). Access to the submission toll and proposal templates is available on the 5GINFIRE website (<https://5ginfire.eu/>).

3 Participation of successful proposals in 5GINFIRE

3.1 3rd party agreement

Once a proposal is selected, the proposer organization will be contracted by the project coordinator (Eurescom) as a 3rd party receiving financial support. This will require the signature of the agreement of which can be found as download on the 5GINFIRE website together with this call information.

Further remarks:

- Before awarding any grants to a third party, it will be checked whether the third party is a legal entity with a history of at least three years of commercial operations, and has not been declared insolvent.
- Any third party funding agreement will contain a clause ensuring that the European Commission and the Court of Auditors can exercise their powers of control, concerning documents premises and information, including those stored on electronic media.

3.2 Timing for implementation

The experiments accepted in this Open Call will start the planned work in March 2019 and should be completed in August 2019 - experiment duration six months.

3.3 Mandatory participation at meetings

The accepted 3rd Parties will need to attend two project meetings (kick-off meeting and consultation on experiment status) and 5GINFIRE review project meeting if required by EC.
